ITEXUS: COMPANY OVERVIEW

Fintech experience applied to wealth management and advisory platforms.

WHO WE ARE

300+
Projects delivered over 10 years

80+
Fintech projects over 10 years

130+
IT specialists and engineers

50+
Senior developers

Across industries

Fintech, e-commerce, healthcare, social and insurance.

A complete delivery team

Backend, frontend, mobile and cross-platform developers; DevOps and QA engineers; business analysts, project managers and designers.

Applied to wealth management

Capital management, stock trading, neobanking and crypto experience, applied to advisor and investor workflows.

CLIENTS & PARTNERSHIPS

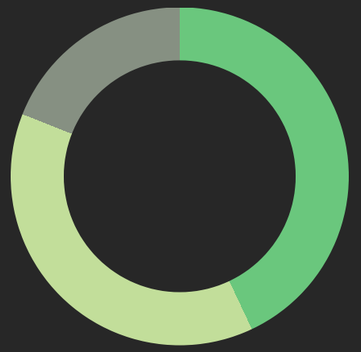

94%
Client retention rate

75%
Of clients come through referrals

170+
Clients across 23 countries

140+
Partners across the ecosystem

Where our clients are

- **43%** USA
- **38%** Europe
- **19%** Other countries

Industry and technology partners

Startups and accelerators; payments, KYC, BAA, trading platforms and domain experts.

AWS, Azure, Google Cloud, DigitalOcean and Heroku (PaaS).

Recognition and client reviews

WEALTH MANAGEMENT EXPERIENCE

Digital products for investors, advisors and investment operations.

Investor onboarding

Risk questionnaires, investment goals and time horizons.

Advisor workspaces

Portfolio construction tools and client oversight.

Portfolio management

Model and individual portfolios, monitoring and rebalancing.

Analytics & reporting

Performance views, benchmarks and portfolio insights.

Connected platforms

Market data and advisor platforms, including Orion Advisor.

Investor experience

Client portals, notifications and clear investment information.

From advisory journeys to integrated platforms Product definition, design, engineering, QA and ongoing support.

BROADER FINTECH EXPERTISE

WEALTH & MARKET INTEGRATIONS

Advisor platforms	**Orion Advisor** Portfolio and advisor technology integration
Bank account aggregators	PLAID, ENVESTNET, DWOLLA, Finicity, MX, aiia, SALTEDGE, tink (A Visa Solution)
Trading platforms	InteractiveBrokers, barchart, TD Ameritrade, TradeStation, Alpaca
Financial data providers	polygon.io, FINAGE, InteractiveBrokers, barchart, TD Ameritrade, FXCM, Edgewater Markets, CQG
Financial data display	ECHARTS, TradingView, ChartIQ, FusionCharts, HIGHCHARTS

INTEGRATION EXPERTISE: SERVICES

KYC & AML services	veriff, Shufti Pro, onfido, IDnow., Socure, ALLOY, Vouched, experian
Payment gateways	stripe, PayPal, Braintree, amazon pay, SecurionPay, authorize.net A Visa Solution, flutterwave, SYNAPSEFI
Email & SMS	SendGrid, twilio, mailchimp, sendinblue, mailgun
Speech recognition	Speechmatics, IBM, Google Cloud, amazon Transcribe, Microsoft Azure Cognitive Services
Maps & geocoding	Google Maps, tomtom, TravelTime, OpenStreetMap, MapQuest

OUR STRENGTHS

Fintech expertise for wealth platforms

Ten years delivering complex, high-load financial solutions.

Business analysis for investment workflows

Experienced business analysts with a strong financial domain background.

End-to-end wealth product delivery

Service design, engineering, quality assurance and ongoing support.

Modern technology experience

Work with startups at scale keeps our technology expertise current.

Flexible delivery

An agile mindset and a delivery approach that adapts to the project.

02

HOW WE WORK

Flexible cooperation, transparent delivery and quality throughout the lifecycle.

STAFF AUGMENTATION

Extend your team while keeping control of delivery.

Full control

Manage the team and processes directly. Integrate Itexus engineers with your existing team.

No hiring overhead

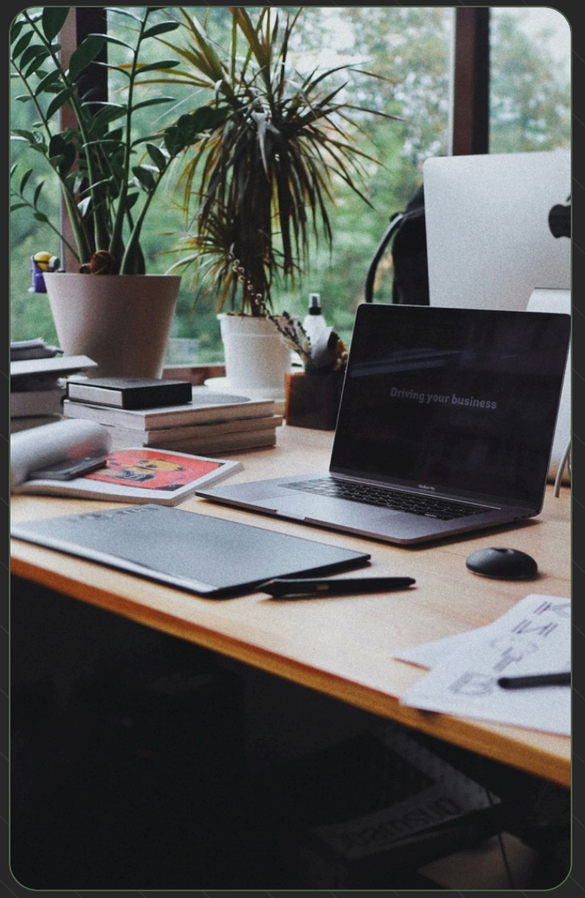

Add expertise without hiring HR managers or recruiters, or paying recruitment agency fees.

Flexible scaling

Scale the team up or down as the workload changes.

Specialists on demand

Bring in specific skills on a part-time or full-time basis for a particular project task.

PROJECT-BASED COOPERATION

Agile flexibility

Frequent releases and demos let you change requirements, incorporate ideas or pivot.

Full collaboration

Exchange ideas and brainstorm with a proactive team focused on the best product for your budget.

Maximum cost efficiency

The right resources for each task. Only efficient hours within the provided estimates are billed; outages and inefficient work are not billed.

Strict budget control

Understand what your budget delivers, the remaining forecast and how each requirements change affects cost.

Transparency and pay as you go

Progress and costs are reported weekly. Pay for the work you have reviewed and approved.

Documentation

Keep project knowledge accessible, reduce reliance on individuals and support efficient remote development.

Collective expertise

Access Itexus’s expertise from hundreds of combined years of work across numerous development projects.

PROJECT ACTIVITIES & DELIVERABLES

From the first conversation to an agreed product and delivery baseline.

01 Presales | 02 Discovery | 03 Development & testing | 04 UAT & rollout

01 Presales

- Product and/or MVP scope definition
- High-level estimation
- Project timeline
- Indicative project costs

02 Discovery

- Product vision
- Epics and user stories
- Solution architecture
- Integrated services analysis
- Scope prioritization
- Detailed project estimate

DEVELOPMENT, TESTING & ROLLOUT

01 Presales | 02 Discovery | 03 Development & testing | 04 UAT & rollout

03 Development & testing

- Tested and deployed applications
- CI/CD pipeline
- Updated requirements, user stories and acceptance criteria
- Progress tracking reports and release notes
- End-to-end test documentation: strategy and plan, suites and checklists, test result reports

04 UAT & rollout

- User guides and manuals
- Handover sessions
- Documented user acceptance testing (UAT) results
- Stabilization backlog

DISCOVERY: MANAGEMENT & ANALYSIS

Role	Assess	Analyze & elaborate	Finalize
Project manager	• Kick off discovery • Develop the discovery plan • Lead the discovery team • Facilitate stakeholder interviews	• Prepare the project plan, resource plan and schedule for the entire project	• Discovery phase report • Project plan • Risk register
Business analyst	• Assess the existing application and business gaps • Document high-level requirements • Analyze third-party solution providers	• Prepare epics and user stories • Prioritize the backlog • Analyze third-party solution documentation	• Vision & scope document • Updated work breakdown structure (WBS) • Prioritized backlog • Epics and stories for the next two sprints

DISCOVERY: ARCHITECTURE & DESIGN

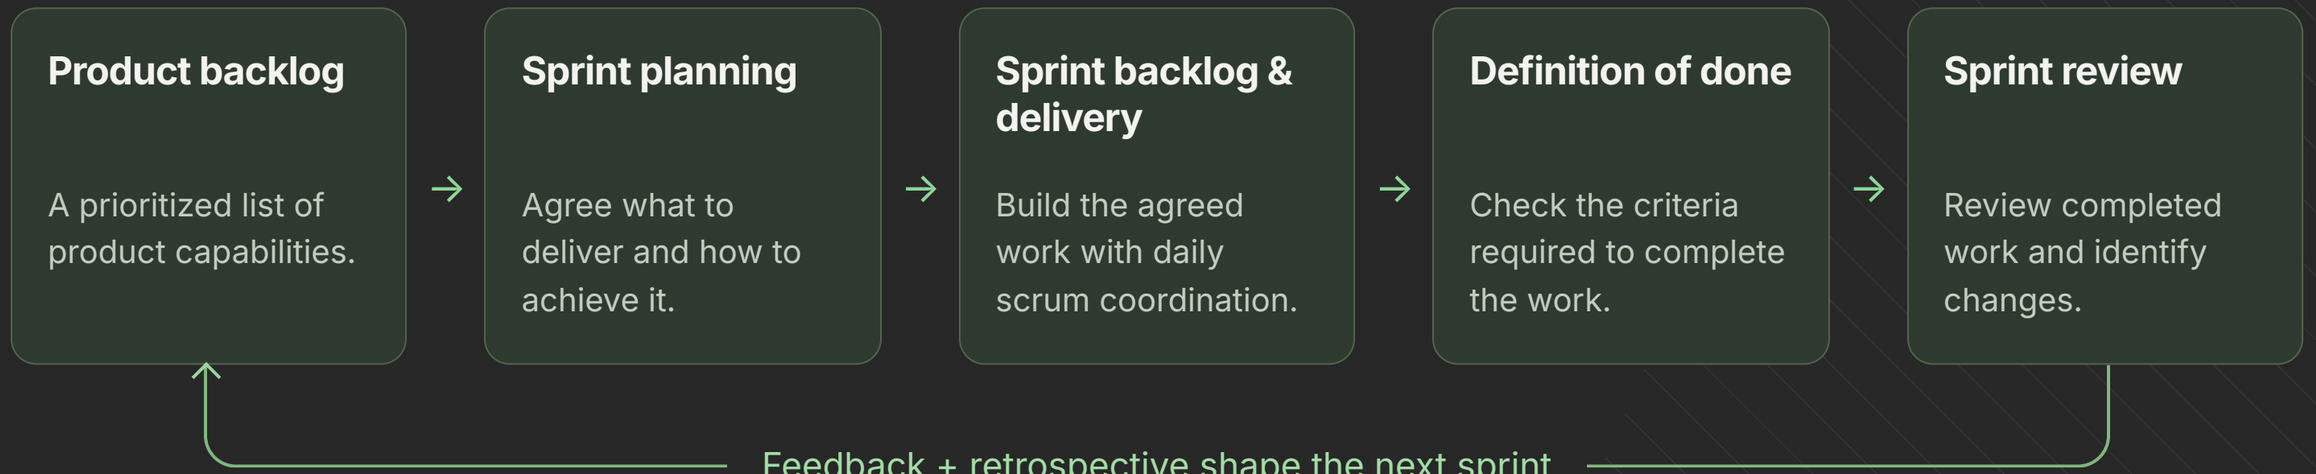

Role	Assess	Analyze & elaborate	Finalize
Solution architect / tech lead	• Define security, scalability and availability requirements • Analyze data warehouse integration	• Investigate integrations and technical risks • Define solution and infrastructure architecture • Update estimates for the entire project	• Solution architecture overview • Infrastructure architecture • Technology and solution recommendations • Third-party integration plan
UI/UX designer	• Review branding and style guide • Interview stakeholders • Create personas and customer journeys	• Create mockups • Review with stakeholders • Create a clickable prototype	• Mockups and wireframes • Clickable prototype • Personas and customer journey map

AGILE DELIVERY METHODOLOGY

2 weeks

A typical sprint

Transparent communication, fast visible results to test hypotheses, and forecasts supported by planning and reporting. The process adapts as requirements change.

Sprint retrospective

Discuss what went well and what to improve for the next sprint.

Product owner · team · scrum master

Align priorities, deliver the product and support an effective sprint process.

COMMUNICATION & COLLABORATION

Development center in Poland

A shifted working schedule provides at least 4–5 hours of overlap with US time zones.

Closer collaboration when needed

The team can travel onsite when the project calls for closer cooperation.

Daily contact

Daily standups align with your schedule.

Regular feedback

Reviews, retrospectives and demos after each sprint improve delivery and keep progress clear.

4–5 hours

Daily overlap with US time zones

Channels and shared documentation.

- Skype
- Google Hangouts
- Gmail
- Cisco Webex
- Slack
- Confluence

CODING STANDARDS

Consistent coding guidelines

Formatting, indentation and line length; naming conventions; file structure and comments; error handling and security best practices.

Simple, maintainable design

Follow KISS, YAGNI and DRY principles.

Thorough code review

Review code changes against project conventions and engineering standards.

Legal and security compliance

Ensure compliance with the international legal and security standards and regulations applicable to the project.

Measure code quality

- Technical debt
- Commits per day
- Duplicate lines
- Unit test coverage
- Security violations

Code quality tools

SonarQube

ESLint

Flake8

Bandit

TRANSPARENCY & REPORTING

Keep access to project status, costs, bottlenecks, risks, potential problems and proposed solutions, so you can make informed decisions throughout delivery.

Daily

Status updates

Communicate progress and the current state of the project at least every day.

Weekly

Issues & improvements

Update project information, discuss bottlenecks and risks, and share possible improvements at least weekly.

Monthly

Financial visibility

Review finances, forecasts and project outlook, with a financial report at least monthly.

Shared visibility Progress, decisions, delivery risks and cost information stay accessible between scheduled updates.

QUALITY FIRST

Automated checks at three levels, complemented by hands-on product testing.

Unit tests

Check individual components and business logic.

Service tests

Verify APIs, integrations and interactions between services.

UI tests

Check key user flows through the product interface.

Manual product testing

Our QA team also tests the product hands-on: checking new features and user journeys, and documenting scenarios for future automation.

Early testing

Prevent defects from the start.

ISTQB-certified QA

Certified QA professionals.

ISO/IEC 25010

System and software quality models.

OWASP Top Ten

A basis for security testing.

QA THROUGHOUT DELIVERY

Unit test coverage

Cover the code with unit tests.

Automated regression

Use service-level and UI tests to automate regression testing.

Manual QA for new features

Test new features and document test cases for future automation.

Visible defect tracking

Log and prioritize every defect in Jira or another defect tracking system.

Tests on every change

Run all automated tests after every code change as part of CI/CD.

Code change → CI/CD tests → Review results → Fix & retest

SUPPORT & MAINTENANCE

Support after launch, with the cooperation model matched to your needs.

Third line of support

Dedicated developers assigned to your project for agreed capacity, ready to react immediately.

Batches of tasks

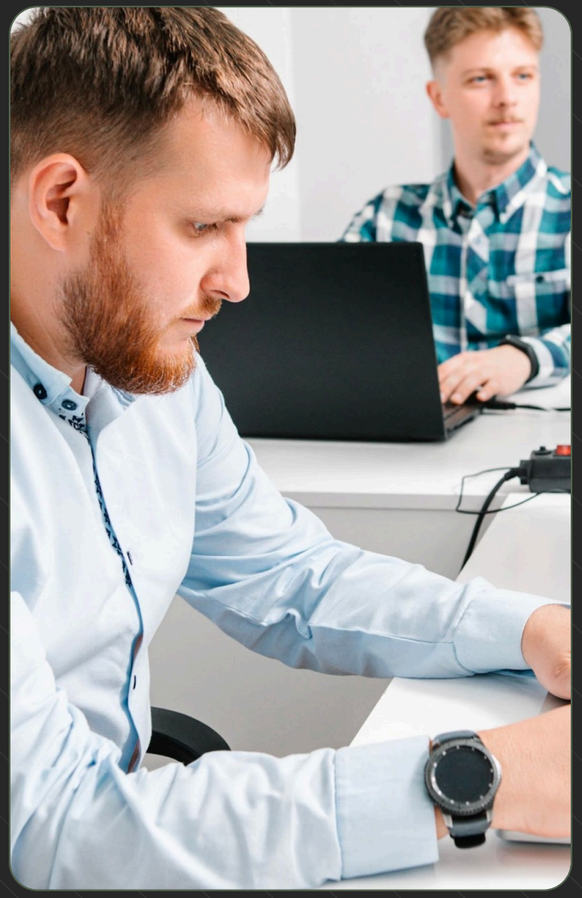

Collect tasks up to an agreed volume, then implement them as a mini-project.

Pay as you go

Requests are handled as resources become available. Pay only for the time actually spent.

Your preferred cooperation model

Discuss a support arrangement that fits your needs after launch.

WEALTH ADVISORY PLATFORM

Gigant CIP, a Swiss wealth-advisory and asset-management company.

Business challenge

Offer remote digital advisory services and automate portfolio workflows.

What Itexus delivered

- Investor profiling and recommended or individual portfolios.
- Advisor tools for construction, monitoring and rebalancing.
- Portfolio alerts and benchmark performance comparison.

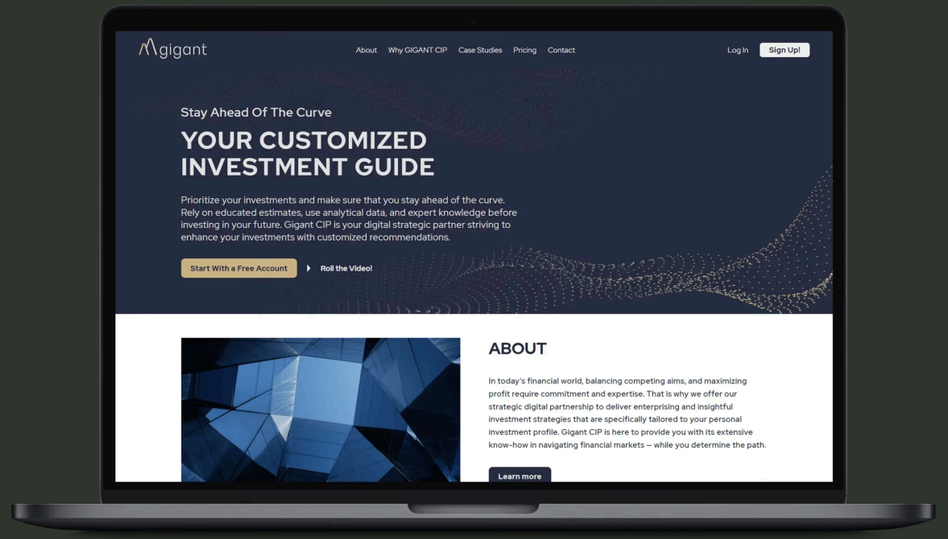

Live platform

Digital advisory service

Full cycle

Development and maintenance

Full case study on itexus.com

COINSTAR DIGITAL WALLET

A global fintech connecting its kiosk network with mobile and web financial services.

Business challenge

Extend kiosk-based services into a secure digital wallet for bank-linked payments and cryptocurrency operations.

What Itexus delivered

- Mobile, web and kiosk applications on a shared backend.
- Bank linking, wallet and crypto flows, plus Orion Advisor integration.
- Identity verification and a support/compliance console.

---

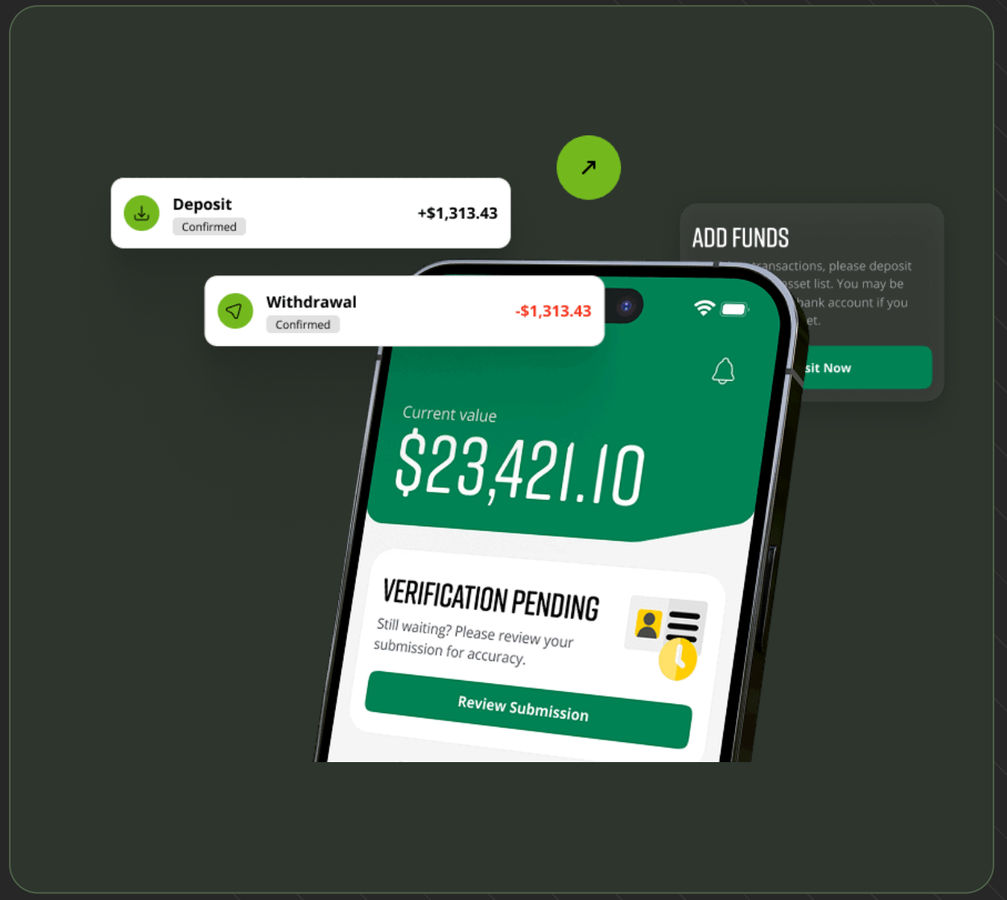

4 months

First version launched

6,500+

App users in the first 2 months

Full case study on itexus.com

CREDIT UNION ONBOARDING

A U.S. credit union serving retail and business members.

Business challenge

Replace a paper-heavy account-opening process without disrupting existing banking operations.

What Itexus delivered

- Omnichannel onboarding with automated KYC and KYB.
- Instant funding and a centralized compliance console.
- Secure AS400 core banking integration, plus Orion Advisor integration.

---

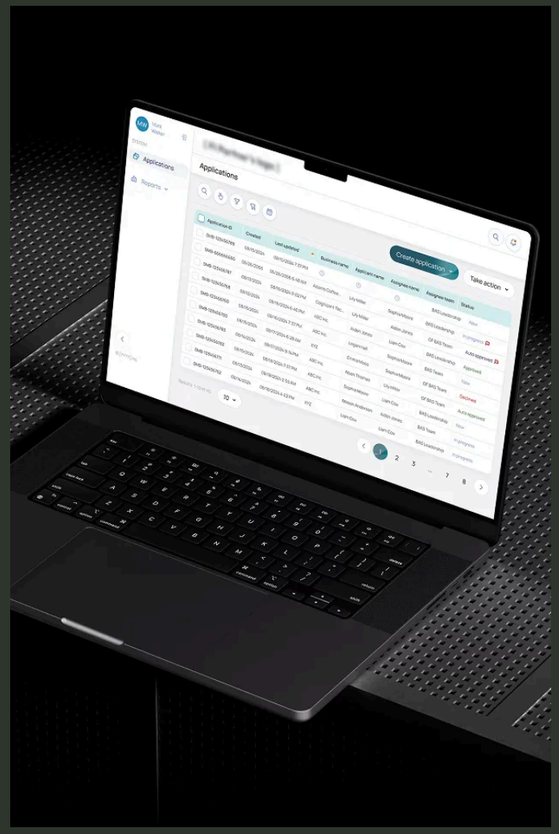

5 days → 15 min

Account-opening time

5,000+

Applications processed monthly
